This chapter can help you solve common setup issues and connect to the Internet. You can find more help from our award-winning customer support at linksys.com/support.

Your router was not successfully set up

If Linksys Smart Wi-Fi did not complete the setup, you can try the following:

 Press and hold the Reset button on your router with a paperclip or pin until the LED starts flashing (about 10 seconds), then install the router again.

- Temporarily disable your computer's firewall (see the security software's instructions for help), then install the router again.

- **3.** After downloading and installing Service Pack 3, install the router again.

Linksys EA-Series Troubleshooting

Your Internet cable is not plugged in message

If you get a "Your Internet cable is not plugged in" message when trying to set up your router, follow these troubleshooting steps.

 Make sure that an Ethernet or Internet cable (or a cable like the one supplied with your router) is securely connected to the yellow Internet port on the back of the router and to the appropriate port on your modem. This port on the modem is usually labeled Ethernet, but may be named Internet or WAN.

- **3.** If your Internet service is cable, verify that the cable modem's **CABLE** port is connected to the coaxial cable provided by your ISP.
 - *Or*, if your Internet service is DSL, make sure that the DSL phone line is connected to the modem's **DSL** port.
- **4.** If your computer was previously connected to your modem with a USB cable, disconnect the USB cable.
- 5. Install the router again.

Cannot access your router message

If you cannot access your router because your computer is not connected to your network, follow these troubleshooting steps.

To access your router, you must be connected to your own network. If you currently have wireless Internet access, the problem may be that you have accidentally connected to a different wireless network.

To fix the problem on Windows computers:

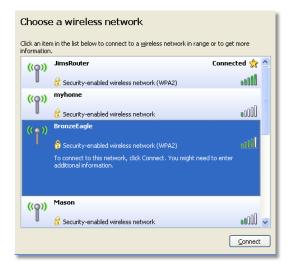

1. On your Windows desktop, right-click the wireless icon in the system tray. The wireless icon is different depending on which version of Windows you are using. Το εικονίδιο ασύρματου δικτύου διαφέρει ανάλογα με την έκδοση των Windows που χρησιμοποιείτε.

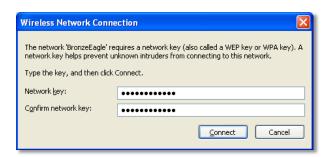

Click View Available Wireless Networks. A list of available networks appears.

 Click your own network name, then click Connect. In the example below, the computer was connected to another wireless network named JimsRouter. The name of the Linksys E-Series network, BronzeEagle in this example, is shown selected.

 If you are prompted to enter a network key, type your password (Security Key) into the Network key and Confirm network key fields, then click Connect.

Your computer connects to the network, and you should now be able to access the router.

To fix the problem on Mac computers:

1. In the menu bar across the top of the screen, click the **Wi-Fi** icon. A list of wireless networks appears. Linksys Smart Wi-Fi has automatically assigned your network a name.

In the example below, the computer was connected to another wireless network named *JimsRouter*. The name of the Linksys E-Series network, *BronzeEagle* in this example, is shown selected.

- **2.** Click the wireless network name of your Linksys E-Series router (*BronzeEagle* in the example).
- **3.** Type your wireless network password (Security Key) into the **Password** field, then click **OK**.
