MARANTZ DESIGN AND SERVICE

Using superior design and selected high grade components, MARANTZ company has created the ultimate in stereo sound. Only **original MARANTZ parts** can insure that your MARANTZ product will continue to perform to the specifications for which it is famous.

Parts for your MARANTZ equipment are generally available at our National Marantz Subsidiary or Agent.

MARANTZ EUROPE B.V.
P.O. Box 80002
Building SFF 2
5600 JB Eindhoven
The Netherlands
Phone : +31-40-732241
Fax : +31-40-735578

ORDERING PARTS

Parts can be ordered either by mail or by telex. In both cases, the correct part number has to be specified. The following information must be supplied to eliminate delays in processing your order:

1. Complete address
2. Complete part numbers and quantities required
3. Description of parts
4. Model number for which the part is required
5. Way of shipment
6. Signature: any order form or telex must be signed, otherwise such part order will be considered as null and void.

All of the above locations are fully equipped to take care of your total service needs or can advice you. Because various countries have differing configuration requirements, it is necessary that you contact the service facility in your particular country. In the event that there is no service location listed for your country, please contact the nearest facility for the necessary assistance.

In case of difficulties, do not hesitate to contact the Technical Department at above mentioned address.

1. TECHNICAL SPECIFICATIONS

FM Tuner Section

Frequency Range	87.5 - 108.0 MHz
Usable Sensitivity	IHF 1.3 μV / 13.5 dBf
Signal to Noise Ratio	Mono / Stereo 78 / 70 dB
Distortion	Mono / Stereo 0.2 / 0.5 %
Stereo Separation	1 kHz 40 dB
A.C.S.	±300 kHz 65 dB
Image Rejection	98 MHz 70 dB
Tuner Output Level	1 kHz, ±40 kHz Dev 940 mV

AM Tuner Section

Frequency Range	531 - 1602 kHz
Usable Sensitivity	Loop 500 μV
Signal to Noise Ratio	50 dB
Distortion	1 kHz, 30 % Mod. 0.5 %
Selectivity	±18 kHz 70 dB

Audio Section

Rated Power	
Front	20 Hz - 20 kHz 8 ohms 70 W / Ch
Center	1 kHz 8 ohms 80 W
Surround	1 kHz 4 ohms 40 W / Ch
THD Front	20 Hz - 20 kHz 8 ohms 0.09 %
Input Sensitivity / Impedance	
Phono	3.5 mV / 47 k ohms
Linear	220 mV / 30 k ohms
Phono Overload (1 kHz, 1 % THD)	
Phono	150 mV
Signal to Noise Ratio (IHF A) RATED Power	
Phono	77 dB
Linear	103 dB

Video Section

Input / Output Level / Impedance	1.0 V_{p-p} / 75 ohms

Others

Power Supply	AC 230 V 50 / 60 Hz
Power Consumption	550 W

Dimemsions

Width	16 - 3 / 4 inches (426 mm)
Height	5 - 1 / 4 inches (132 mm)
Depth	13 - 1 / 2 inches (341 mm)
Weight	21 lbs (9.4 kg)

Specifications subject to change without prior notice.

5. TEST EQUIPMENT REQUIRED FOR SERVICING

This table lists the test equipment required for servicing.

Item	Use
Distortion Analyzer	Distortion measurements
Audio Oscillator	Sinewave and squarewave signal source
ACVTVM	Voltage measurements (AC)
Oscilloscope	Waveform analysis and trouble shooting and ASO alignment
Circuit Tester	Trouble Shooting
DCVTVM	Voltage measurements (DC)
AC Wattmeter	Monitors primary power to amplifier
Line Voltmeter	Monitors potential of primary power to amplifier
Variable Autotransformer	Adjust level of primary power to amplifier
Shorting Plug	Shorts amplifier input to eliminate noise pickup

6. IDLING CURRENT ADJUSTMENT

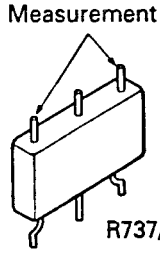
(1) Before switching the power ON, set the Master Volume control to the minimum position and the Balance and Tone controls to the center positions. Then, rotate the semi-fixed resistors R719 (L CH) and R720 (R CH) on the PC board PV04 fully clockwise.
(2) Connect a digital voltmeter, set for the DC voltage input to the pertinent test points (the marked ones of R737-R738) on the PC board PV04. (Positive: Left side, Negative: Right side)
(3) After the completion of the above setup.
Switch the power ON and adjust the semi-fixed resistors R719 (L CH) and R720 (R CH) on the PC board PV04 according to the reading of the digital voltmeter. The setting values are 7 mV (19 mA) of the both channels.

Please refer to the table below.

Power ON

30 sec. ~ 1 min.	4 mV
1 ~ 2 min. later	5 mV
More than 5 min.	7 mV

Measurement point



R737/R738

7. SERVICE PROGRAM

1. T.R POINT ME (tracking point memory) mode.
From power OFF (stand-by mode), when the POWER switch is pressed ON while pressing the MEMO and PRESET DOWN key, the T.R POINT ME mode is called. Frequencies to be memorized are as follows.

	P1	P2	P3	P4	P5	P6	P7	P8
FM	90.0 MHz	98.0 MHz	106.0 MHz	87.5 MHz				
AM					603 kHz	999 kHz	1404 kHz	173 kHz

	P9	P10	P11	P12-P30	
FM					
AM	209 kHz	272 kHz	152 kHz	531 kHz	

8. TUNER ALIGNMENT PROCEDURES

1. When you adjust a set, use a signal generator with a counter with which you can correctly read frequencies, or connect a counter to a signal generator with a counter terminal for both AM and FM.
2. As a rule, use a band-pass filter (B.P.F 200-15 kHz) designated by IHF in adjustment and measurement of FM.
Be sure to use a filter especially in adjustment of STEREO DISTORTION and SEPARATION. (Attenuation at 19 kHz is to be 30 dB at least.)
3. The controller (QU01) used in this set has a function to preset and memorize the frequencies of guard and tracking point to be used in adjustment and measurement.

- Before alignment, connect a dummy resistor of 47 kohms to the tape out terminal.

4. FM Alignment Procedures
(Function switch at "FM" position and MODE switch at "AUTO STEREO" position)

- **FM RF Alignment**

Step	Signal Source Connection	Signal Frequency	Indicator Connection	Digital Readout Frequency Setting	Adjust
1	FM signal generator to FM antenna terminal. Adjust the RF signal output so that slight noise occurs at the upper and lower sides of the output waveform.	98.0 MHz	AC VTVM to L- or R-channel output (TAPE OUT)	98.0 MHz (P2)	Front end IFT for maximum output and minimum distortion.
2	FM signal generator 500 µV output to FM antenna terminal (75-ohm). Modulation 1 kHz 53.3% (40 kHz)	98.0 MHz	Distortion meter to L- or R-channel output (TAPE OUT)	98.0 MHz (P2)	L201 core fore minimum distortion.

- **FM IF Alignment**
(Function switch at "FM" position and MODE switch at "AUTO STEREO" position)

Step	Signal Source Connection	Signal Frequency	Indicator Connection	Digital Readout Frequency Setting	Adjust
1	FM signal generator 500 µV output modulated by MPX signal generator to FM antenna terminal (75-ohm). Modulation level: IHF 53.3% (40 kHz) +8% pilot dev.	Stereo L-channel (1,000 Hz)	VTVM to L-channel output (TAPE OUT L channel)	98.0 MHz (P2)	Front end IFT for minimum distortion.
2		Stereo R-channel (1,000 Hz)	VTVM to R-channel output (TAPE OUT R channel)		

- **Muting Level Alignment**
(Function switch at "FM" position and MODE switch at "AUTO STEREO" position)

Step	Signal Source Connection	Signal Frequency	Indicator Connection	Digital Readout Frequency Setting	Adjust
1	FM signal generator 6.3 µV output to FM antenna terminal (75-ohm)	98.0 MHz		98.0 MHz (P2)	R212 to a point at which shows "tuned."

- **Multiplex Alignment**
(Function switch at "FM" position and MODE switch at "AUTO STEREO" position)

Step	Signal Source Connection	Signal Frequency	Indicator Connection	Digital Readout Frequency Setting	Adjust
1	FM signal generator 500 µV output modulated by MPX signal generator to FM antenna terminal (75-ohm) Modulation level: IHF 53.3% (40 kHz) +8% pilot dev.	Stereo L-channel (1,000 Hz)	VTVM to R-channel output (TAPE OUT R channel)	98.0 MHz (P2)	R211 so that channel separation is identical between both channels.
2		Stereo R-channel (1,000 Hz)	VTVM to L-channel output (TAPE OUT L channel)		
3	Repeat steps 1 and 2.				

5. **AM Alignment Procedures**
(Function switch at "AM" position)

- **AM IF Alignment**

Step	Signal Source Connection	Signal Frequency	Indicator Connection	Digital Readout Frequency Setting	Adjust
1	Sweep generator to AM antenna terminal	450 kHz	AC VTVM to L- or R-channel output (TAPE OUT)	—	LA06 Maximun and symmetrical waveform.

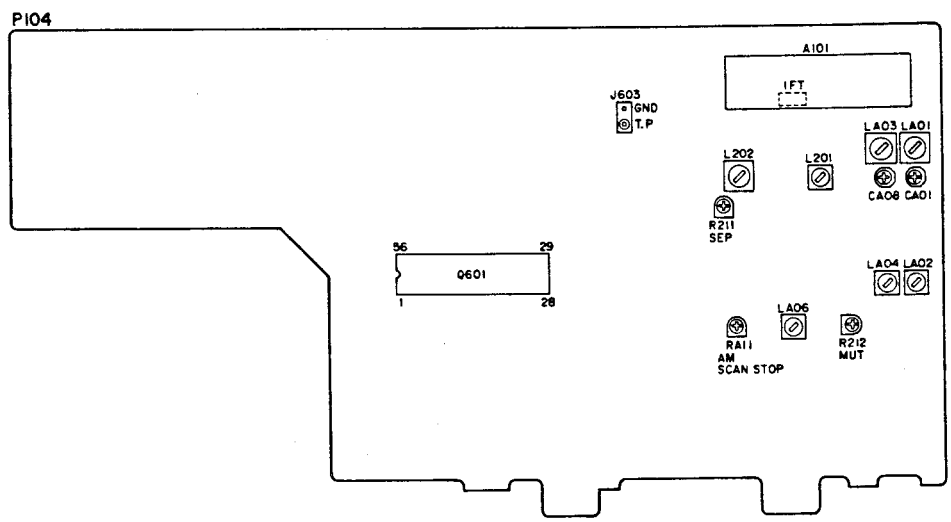
- **AM RF Alignment**

Step	Signal Source Connection	Signal Frequency	Indicator Connection	Digital Readout Frequency Setting	Adjust
1	AM signal generator to AM loop antenna in a test loop	(MW) 603 kHz (LW) 173 kHz	VTVM to L- or R-channel output (TAPE OUT)	(MW) 603 kHz (P5) (LW) 173 kHz (P8)	(MW) LA01 for maximum output. (LW) LA03 for maximum output.
2		(MW) 1404 kHz (LW) 272 kHz		(MW) 1404 kHz (P7) (LW) 272 kHz (P10)	(MW) CA01 for maximum output. (LW) CA08 for maximum output.
3	Repeat steps 1 and 2 until sensitivity is maximized.				

- **AM Auto Stop Alignment**
(Function switch at "AM" position)

Step	Signal Source Connection	Signal Frequency	Indicator Connection	Digital Readout Frequency Setting	Adjust
1	RF generator to AM loop antenna in a test loop (500 μV/m)	999 kHz	—	999 kHz (P6)	RA11 so that shows "TUNED" on the display.

9. ALIGNMENT AND TEST POINT



10. CIRCUIT DESCRIPTION

1. Input Selector

- Input selector
  The function of this circuit is to select between the components connected to the rear panel. The circuit uses an LC7821 IC (QV01), which is serially controlled by the microprocessor (QU01).

2. Surround Block

- The surround block consists of a buffer amplifier, phase shifter, Dolby Pro Logic decoder and its controller, and digital delay and surround mode switches.
- Buffer amplifier
  The stereo signal is first input into this buffer amplifier (QF01), which provides a 0 dB gain at all frequencies. After passing through the amplifier, the signal is distributed to the various blocks.
- Phase shifter and adder
  Here the phase of the signal from low range to high range frequencies is shifted. First, the L/R signals are input to the QM02-2 and the L-R (phase difference component) signal is extracted. This L-R signal passes through the phase shifter (QM03, QM04) and then enters the matrix circuit (QM01). Here the L-R signal is applied in reverse phase to the L signal and in same phase to the R signal. These signals then become the front L and R signals for the MATRIX and HALL surround modes. The adder (QM02-1) produces an L+R signal which is used as the surround signal in the HALL surround mode and as the L channel signal in SIMULATED STEREO mode.
- Dolby Pro Logic decoder
  This circuit uses a Pro Logic decoder to decode a Dolby-encoded signal into four signals for the front left, front right, center and surround channels. The IC used is an NJM2177L (Q601). This circuit operates together with center mode control.
  This IC has 2-channel and 3-channel modes in addition to the Dolby Pro Logic 4-channel mode, but in this unit the IC is used for 4-channel operation only. (See the Q601 Function Table.) Also, the center mode is controlled by the NJU3711 (Q603) and TC9214P (Q604).

The signal output from the buffer amplifier (QF01) is input to the L and R input pins of the Dolby Pro Logic decoder (Q601, pins 15 and 22). The front L and R channel signals decoded here are then output from pins 32 and 33 of Q601 and input to the surround mode selector (QM05). These signals are then output as the front L and R channel signals whenever the unit is set to Dolby surround mode. In the same way, the center signal is output from pin 38 of Q601 and input to the CENTER volume (QG02).
The surround signal is output from pin 39 of Q601, input to the surround mode selector (QM05), and then sent to the digital delay circuit (Q602). After the signal is applied with a delay in this circuit, it is returned to the Q601 and input to the Dolby B decoder circuit. The signal is then output from pin 39 of Q601 as the final surround signal. After that, the signal passes through QM05 and enters the SURROUND volume (QG02).
There are three center modes—NORMAL, PHANTOM and WIDE. Control of these modes is carried out by the TC9214P (Q604), which is in turn controlled by the port expander NJU3711 (Q603). The center mode control signal from the microprocessor is input as serial data from pins 43, 46 and 47 of QU01 to pins 8, 9 and 10 of Q603 to set each of Q603's ports to H or L. The control pins of the analog switch (Q604) connected to these ports turn the internal switches ON/OFF to control the Q601's center mode. (See the Q601 Function Table.) When the center mode is set to NORMAL, the center channel signal's low-frequency component is output to the front L and R channels. In PHANTOM mode, since no center speaker is used, the entire center channel signal is distributed to the front L and R channels. The Q603, in addition to controlling the center mode, also carries out control of the Q601 noise sequencer and speaker system 1 and 2. The noise sequencer functions to generate the signal used to adjust the balance of each channel in Dolby Pro Logic mode. When the TEST TONE switch is pressed ON, the noise sequencer outputs pink noise to each channel in sequence at 1.5-second intervals in the order: L → CENTER → R → SURROUND → L. (See the Q601 Function Table.)

NJM2177L (Q601) Function Table

NOISE SEQUENCER

PIN NAME	NOISE-CNT-E	NOISE-CNT-A	NOISE-CNT-B
PIN No.	PIN 23	PIN 24	PIN 25
SIGNAL SELECT	H	X	X
NOISE L	L	L	L
NOISE C	L	L	H
NOISE R	L	H	L
NOISE S	L	H	H

OPERATION MODE

PIN NAME	MODE-CNT	
PIN No.	PIN 31	Note
2CH (Lt, Rt, S')	L	S' = Lt-Rt or NOISE
3CH (L, C, R, S')	High Z	S' = Lt-Rt or NOISE
4CH (L, C, R, S', S)	H	

CENTER MODE

PIN NAME	CENTER-CNT	CENTER-MODE
PIN No.	PIN 30	PIN 36
CENTER OFF	L	X
NORMAL	H	0.22 µF
PHANTOM	H	OPEN
WIDEBAND	H	10 µF

- Digital delay

  This circuit uses the NJU9701 (Q602) to add a time delay to the surround channel signal when a surround mode is selected, and is controlled by the microprocessor.

  10 kHz active filters (L.P.F.) are placed on both the input side and output side of the delay circuit. Each filter has a gain of –9.4 dB and 4.4 dB. The delay times used for the various modes are as follows:

  DOLBY: 15 ~ 30 ms, MATRIX/HALL/SIMULATED: 2 ~ 33 ms.

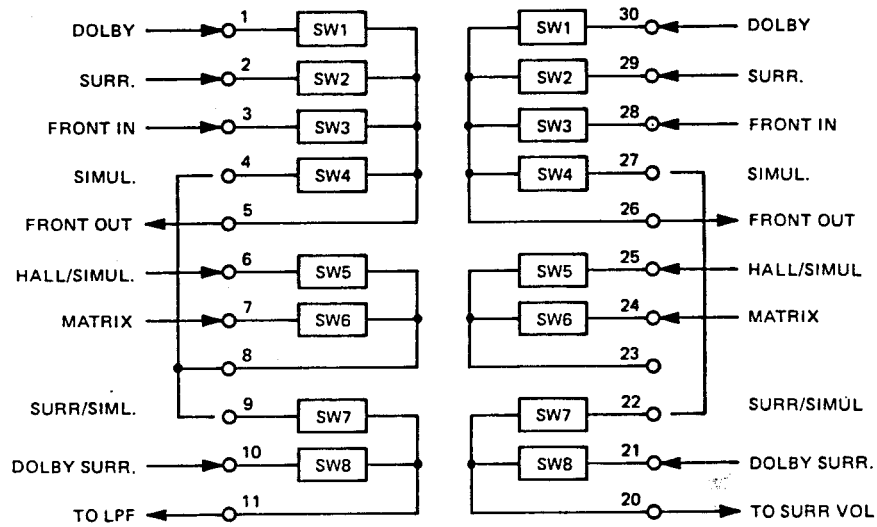
  Initial delay settings are as follows:

  DOLBY/MATRIX/HALL: 20 ms, SIMULATED: 10 ms

- Surround mode selector

  The LC7821 (QM05) is used for the surround mode selector, which switches the surround modes in the following sequence:

  OFF → DOLBY → MATRIX → HALL → SIMULATED



LC7821 (QM05) Function Table

SURROUND SELECTOR	SWITCH No.							
	1	2	3	4	5	6	7	8
OFF	0	0	1	0	X	X	X	X
DOLBY	1	0	0	0	0	0	0	1
MATRIX	0	1	0	0	0	1	1	0
HALL	0	1	0	0	1	0	1	0
SIMULATED STEREO	0	0	0	1	1	0	1	0

0 = SWITCH OFF
1 = SWITCH ON
X = DON'T CARE

3. Master Volume

- The master volume (RG01) is a motor-driven quadruple potentiometer for controlling the volume of the front left, front right, center and surround channels. Control of the motor is carried out by the LB1641 (QD01). QD01 is a motor drive IC with pins 5 and 6 used for input and pins 2 and 10 used for output.

LB1641 (QD01) Function Table

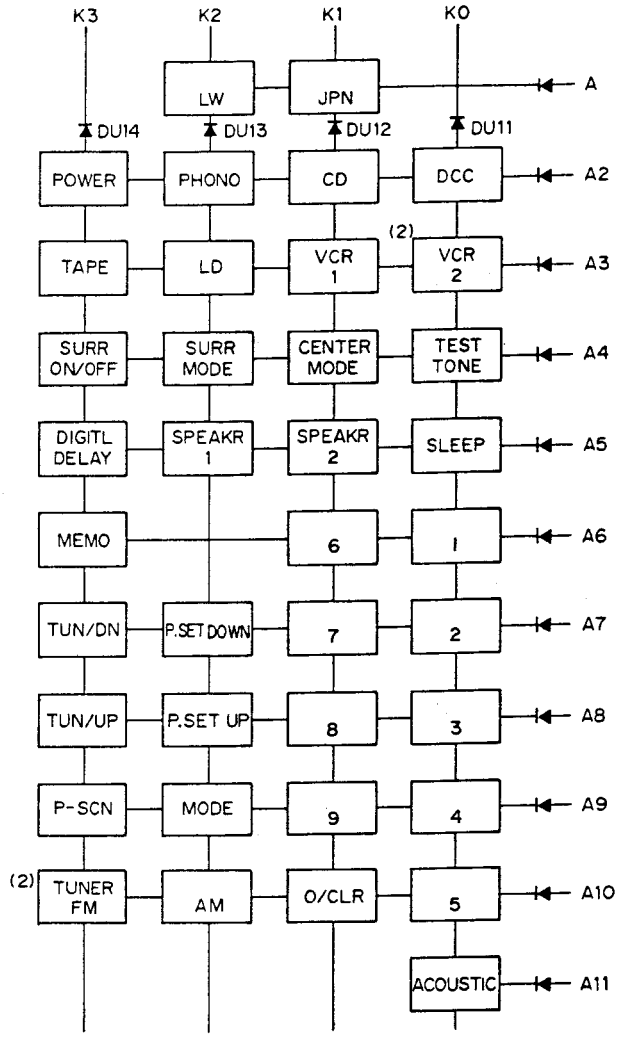
Volume	Input		Output	
	6	5	2	10
UP	L	H	H	L
DOWN	H	L	L	H
STOP	L	L	L	L

QD01 is controlled by the NJU3711 (Q603). Q603 is controlled by serial data from the microprocessor.

4. Center/Surround Volume

- Electronic potentiometers (TC9213P) are used for the center channel and surround channel volume (QG02). One potentiometer consists of an element for varying the volume in 10 dB steps and an element for varying the volume in 1 dB steps. Buffer amplifiers (QG01, NJM4558DD) are located between the elements.

Key Matrix



The two keys of [LW] [JPN] are lock switches for use in initial setting.

Description of keys

A: Diode switches for initial setting

[LW] : Tuner band select switch. When this key is ON, the AM band is unconditionally set to two bands. The indications of these bands on the FL display are MW and LW. This key is valid only in the receiver mode.

[JPN] : Tuner destination select switch. When this key is ON, the set is unconditionally set to the Japanese version. This key is valid only in the receiver mode.

● Initial setup recall operation: The initial setup is recalled when the POWER key is pressed or when HOLD is changed from LO to HI.

B: Momentary and lock switches (These switches are basically momentary switches unless otherwise specified.)

[1] ~ [9] : Keys for use in inputting numbers in the preset number entry, clock setting or timer setting operation. In the timer setting operation, "1" is for to select ONCE and "2" is for to select DAILY.

[O/CLR] : Key for use in inputting "0" as well as clearing data in various modes.

[SLEEP] : Sleep timer mode key for to set or turn ON/OFF the sleep timer.

[TUNER FM] : Tuner/Band FM setting key. When this key is pressed, the TUNER input function and the FM BAND will be selected. In the amplifier mode, this key functions simply as the TUNER key.

[TUN/UP] : Frequency up (increase) key for in the tuner mode. Each press of the key increases the frequency by 1 step, and holding the key depressed increases it successively. This key is invalid in other modes than the tuner mode, such as the CD and LD modes.

[TUN/DN] : Frequency down (decrease) key with the opposite functions to the TUN/UP key above.

[AM] : Tuner/Band AM setting key. When LW is selected, this key selects the MW or LW band in an alternate cycle. If this key is pressed while listening to FM or playing other source, the band which was last received will be recalled (last memory), and further press of the key switches the band.

[P-SCN] : Key for use in automatic scanning of tuner preset channels. When this key is pressed, FL segments "PRESET SCAN" light, the set enters the preset scan mode and the preset channels will be scanned. This key is invalid in the amplifier mode.

[MEMO] : Key for use in setting the preset memory, timer, sleep timer, clock, etc. As the operation differs depending on the modes, refer to the description of each operation for details.

POWER : Key for turning the power of the set ON/OFF. This is a non-lock switch which turns power ON/OFF in an alternate cycle. When the power is OFF, all of the output ports except for some special ports are in the low level, but specified input ports and the remote control input ports are accessible. The details will be described in the description of each item.

P SET UP : Preset channel up (increase) key for in the tuner mode. Pressing this key while a preset number is displayed increases the number, and pressing this key while it is not displayed recalls P1 or the smallest preset number. This key allows to select a preset number within the same band (in FM band, it can recall only the FM preset numbers).

P SET DOWN : Opposite operations to the above occurs.

SURR ON/OFF : Surround mode ON/OFF key. Press to turn ON/OFF in an alternate cycle. The initial condition is OFF.

SURR MODE : Surround mode select key. The initial condition is PRO LOGIC, and further press of the key switches to MATRIX, HALL, SIMULATED STEREO and to PRO LOGIC again.

CENTER MODE : Center mode setting key for use in PRO LOGIC mode. The initial condition is NORMAL, and further press of the key switches to WIDE, PHANTOM and NORMAL again.

SPEAKR 1 SPEAKR 2 : Speaker system select keys. The initial conditions are OFF (with ports LO), and each press switches ON/OFF in an alternate cycle. These keys are controlled by NJU3711D, and the corresponding ports are turned ON/OFF accordingly. The conditions of these keys are also backed up by the last memory function.

TEST TONE : When the surround mode is PRO LOGIC, this key puts the Surround IC to the test tone mode. The actual control is performed by the port expander IC (NJU3711D).

PHONO CD VCR 1 VCR 2 TAPE DCC LD : Input selector keys, which output the corresponding serial data.

MODE : FM stereo/mono select key. The initial condition is AUTO STEREO. The switching is based on the serial data sent to the PLL. The switching operation is cyclic. FL indicator "AUTO" lights in the AUTO STEREO mode.

DIGITL DELAY : When the surround mode is ON, this key sets the delay time for each surround mode.

ACOUSTIC : The combinations of the surround modes, center modes and volume levels can be stored in five memories and recalled in the acoustic mode.

* The functions of the keys are as described above. Except in the special case (service mode), if more than one key is pressed, the key pressed first is given the priority.

12. ELECTRICAL PARTS LIST

ASSIGNMENT OF COMMON PARTS CODES.

RESISTOR

R*** : (1) GD05 x x x 140. Carbon film fixed resistor. ± 5 % 1/4W
R*** : (2) GD05 x x x 160. Carbon film fixed resistor. ± 5 % 1/6W

① — Resistance value

Examples :
① Resistance value

0.1Ω...001	10Ω...100	1kΩ...102	100kΩ...104
0.5Ω...005	18Ω...180	2.7kΩ...272	680kΩ...684
1Ω...010	100Ω...101	10kΩ...103	1MΩ...105
6.8Ω...068	390Ω...391	22kΩ...223	4.7MΩ...475

(Note) Please distinguish 1/4W from 1/6W by the shape of parts used actually.

C*** : CERAMIC CAP.
(1) DD1x x x x 370. Ceramic capacitor
Disc type
Temp.coeff.P350~N1000,50V

① Tolerance
② Capacity value

Examples
①Tolerance (Capacity deviation)
± 0.25pF ... 0
± 0.5pF ... 1
± 5 % ... 5
* Tolerance of COMMON PARTS handled here are as follows :
0.5pF~ 5pF...± 0.25pF
6pF~ 10pF...± 0.5pF
12pF~ 560pF...± 5 %
②Capacity value

0.5pF...005	3pF...030	100pF...101
1pF...010	10pF...100	220pF...221
1.5pF...015	47pF...470	560pF...561

C*** : CERAMIC CAP.
(1) DK16 x x x 300. High dielectric constant ceramic capacitor
Disc type
Temp.chara. 2B4, 50V

① Capacity value

Examples
②Capacity value

100pF...101	1000pF...102	10000pF...103
470pF...471	2200pF...222	

C*** : ELECTROLY CAP.(⧺). FILM CAP.(⫟)
(1) EA x x x x x x 10. Electrolytic capacitor
One-way lead type. Tolerance ± 20 %

① Capacity value
② Working voltage

Examples
①Capacity value

0.1μF...104	4.7μF...475	100μF...107
0.33μF...334	10μF...106	330μF...337
1μF...105	22μF...226	1100μF...118
		2200μF...228

②Working voltage

6.3V...006	25V...025
10V...010	35V...035
16V...016	50V...050

(2) DF15 x x x 350. Plastic film capacitor
One-way type. Mylar ± 5 % 50V

① Capacity value

Examples
①Capacity value

0.001μF(1000pF)...102	0.1μF...104
0.0018μF.....182	0.56μF...564
0.01μF.....103	1μF...105
0.015μF.....153	

NOTE : The above CODES (R***,R***,C***,C*** and C***) are omitted on the schematic diagram in some case.
On the occasion, be confirmed the common parts on the parts list.

NOTE ON SAFETY FOR FUSIBLE RESISTOR:
The suppliers and their type numbers of fusible resistors are as follows;

1. KOA Corporation

Part No.	Type No.	Description
NH05 x x x 140	RF25S x x x x ΩJ	(±5% 1/4W)
NH05 x x x 120	RF50S x x x x ΩJ	(±5% 1/2W)
NH85 x x x 110	RF73B2A x x x x ΩJ	(±5% 1/10W)
NH95 x x x 140	RF73B2E x x x x ΩJ	(±5% 1/4W)

* Resistance value — Resistance value(0.1 - 10kΩ)

2. Matsushita Electronic Components Co., Ltd

Part No.	Type No.	Description
NF05 x x x 140	ERD-2FCJ x x x	(±5% 1/4W)
RF05 x x x 140		
NF02 x x x 140	ERD-2FCG x x x	(±2% 1/4W)
RF02 x x x 140
